

User Story 1: As a new user, I want to open an account with the Planetarium so I can save my celestial findings

- Is the intended use of the service intuitive?
  - Score: 5
  - Overall, yes. Very straightforward to click on 'Create an Account' on login page to go to registration and then enter desired username and password.
- Is the service easy to use?
  - Score: 5
  - Yes, same reasoning as above
- Does the service inspire confidence?
  - Score: 3
  - Overall, yes. If registration credentials are invalid, appropriate feedback is given via browser alerts in most cases. However, in the scenario where a user attempts to register an account with an already registered username, the corresponding browser alert does not show up, which may mislead the user into thinking the system is stagnant or frozen.
- Is the service pleasing to look at?
  - Score: 2
  - The "body" of the registration page (the box and input fields) makes up a small proportion of the total page, with the rest of the page being black. This makes the registration page look "engulfed" or "overwhelmed" by black.

User Story 2: As a user, I want to securely access my account so I can interact with the Planetarium in a secure environment

- Is the intended use of the service intuitive?
  - Score: 5
  - Very straightforward and obvious what to do to login to the Planetarium
- Is the service easy to use?
  - Score: 5
  - Yes, similar reasoning as above
- Does the service inspire confidence?
  - Score: 5
  - Yes, if credentials are valid, user logs in, if not, user receives appropriate feedback regarding why the login is invalid.
- Is the service pleasing to look at?
  - Score: 2
  - Similar reasoning as for registration page

User Story 3: As a user, I want to see my planets and moons added to the Planetarium so I can track my findings

- Is the intended use of the service intuitive?
  - Score: 2

- Planets and moons share a table, which forces planets to have an owner id even though it only makes sense for moons to have one (a planet's owner in the table is just the planet itself, which is circular/redundant). Additionally, planets and moons can have the same id, which could cause confusion. For example, if a moon and planet both have an id of 1, and that moon is owned by that planet, the moon's id and owner id are both 1, which users could misinterpret to mean the moon's owner is itself. Should split table on homepage into two separate tables, one for planets and one for moons.
- Is the service easy to use?
  - Score: 4
  - Once on homepage, what the user can do is fairly obvious
- Does the service inspire confidence?
  - Score: 1
  - A lot of the info on the homepage is not organized well and instead is grouped into cluttered fragments. Also user's may be able to see other user's information, which could cause users to worry about the security of their own information as well as reduce their trust in the application as a whole.
- Is the service pleasing to look at?
  - Score: 4
  - Fitting space themed background on homepage

User Story 4: As a user, I want to add new planets and moons to the Planetarium so I can update my findings

- Is the intended use of the service intuitive?
  - Score: 4
  - Quite obvious how to add new planets/moons on homepage. However, the area to create and delete new planets/moons are cluttered right next to each other, which can be a bit confusing.
- Is the service easy to use?
  - Score: 5
  - Very easy to add a planet or moon, simply input the associated info then submit
- Does the service inspire confidence?
  - Score: 3
  - Overall, yes. However, if a user submits an invalid file type for their image, the necessary feedback doesn't appear.
- Is the service pleasing to look at?
  - Score: 3
  - Area to create planets/moons is a but cluttered and jumbled looking

User Story 5: As a user, I want to remove planets and moons from the Planetarium so I can correct my findings.

- Is the intended use of the service intuitive?
  - Score: 4

- Quite obvious how to delete planets/moons on homepage. However, the area to create and delete new planets/moons are cluttered right next to each other, which can be a bit confusing.
- Is the service easy to use?
  - Score: 5
  - Very easy to remove a planet or moon, simply input the associated info then submit
- Does the service inspire confidence?
  - Score: 3
  - Overall, yes. However, if a user submits an invalid file type for their image, the necessary feedback doesn't appear.
- Is the service pleasing to look at?
  - Score: 3
  - Area to create planets/moons is a bit cluttered and jumbled looking
